

Landing page build steps for Elementor

One page, fourteen sections, top to bottom. Every container and every widget below has its own settings table. Nothing is left for you to guess, and nothing says "same as an earlier step" — work straight through in order.

Built for Elementor Pro 4.1.2	Steps 14	Content width 1250 boxed
Font Inter (Google Fonts)	Page background #FAF9F5	Images to upload 31

Keep the finished page open on a second screen while you build: mysense-my.github.io/lumiere-dental-kota-warisan . If a value here ever looks wrong, that page is the truth.

How to read a settings table

Tab	Setting	Value
Layout	Width	1250
Advanced	Padding	Top 90 Right 30 Bottom 40 Left 30
Style	Typography > Size	Desktop 46 PX · Tablet 38 PX · Mobile 29 PX

Column one is the panel tab to open. Padding and margin are always written per side in that order. Where a row lists Desktop / Tablet / Mobile, switch device view with the icons at the bottom of the panel and set each one — a mobile value never touches desktop. Where a row says **PX**, **EM** or **%**, that is the unit selector beside the field.

What you are building

Step	Section	How
1	Page setup, menu, fonts, global CSS	Settings only
2	Header, including the mobile drawer	Widgets + CSS
3	Hero	Widgets + 1 paste
4	Our Panels	Widgets
5	Why Lumiere	Widgets
6	Dr Tan biography	Widgets + CSS
7	Stats counters	Widgets
8	Services × 8	Widgets + CSS
9	Our Clinic	Widgets + CSS
10	How It Works	Widgets + CSS
11	Patient Stories	Widgets
12	FAQ	Widgets

Step	Section	How
13	Contact	Widgets + 1 paste
14	Footer, WhatsApp button, animations	Widgets

Four rules that apply everywhere

- **No Site Settings globals.** Every colour and font is typed in per widget from these tables. Do not create global colours or global fonts.
- **Name every container** in the Structure panel the moment you create it, using the name from the tree diagram. Right-click the container → Rename.
- **Build one, then duplicate.** Where a card repeats, finish the first completely, then right-click → Duplicate and change only the content.
- **Leave Advanced > Overflow on Default** unless a table says Hidden. Three sections depend on CSS sticky, and one parent set to Hidden silently kills it.

Upload the images

All 31 files are in **1 - Upload to Media Library**. Select everything, including what is inside the **icons** and **panels** subfolders, and drop it into **Media > Add New**. WordPress ignores the folders; they exist only so the filenames match this guide.

Whenever you place an image set **Image Resolution: Full**. Every file is already cropped and compressed for its slot. Do not resize, and do not let Elementor serve a smaller size — that is what makes a photo look soft.

The palette

Hex	Used for
#1F2833	Every H1, H2, H3, and body text inside white cards
#5A6270	Every paragraph and secondary line
#33485C	Button fill — hover #26394B
#8F702A	Eyebrow text, icon glyphs, pill text
rgba(212,178,96,.16)	Icon tile and pill background
#E8D397	Hero button hover, the ring on Dr Tan's portrait
#FAF9F5	Page background, social icon circles
#FFFFFF	Every white card, the footer band
#E9E6DD	The grey tray behind each group of cards
#E6E2D6	Hairline borders, the How It Works spine
#EFECE3	Dividers inside white cards, the quote watermark
#F0B428	Review stars
#25D366	Floating WhatsApp button
rgba(16,28,42,.8)	Photo caption scrim in Step 9

Type scale

Element	Desktop	Tablet	Mobile	Weight	Line	Letter spacing
H1 hero	56	46	33	600	1.2	-2.5 / -2.1 / -1.5
H2 section	46	38	29	600	1.22	-0.9 / -0.8 / -0.6
H2 service card	41	25	23	600	1.22	-0.9
Featured quote	26	23	19.5	600	1.35	-0.4
How-step H3	27	27	24	600	1.3	-0.3
Dr Tan name	23	23	20	600	1.3	-0.3
Card H3	19.5–22	same	same	600	1.3	0
Body / paragraph	15–16	same	same	400	1.4–1.6	0

Element	Desktop	Tablet	Mobile	Weight	Line	Letter spacing
Eyebrow	15	15	15	500	1.4	0

Elementor writes letter spacing in **px**, not em. The values above are already converted — type them as shown, including the minus sign.

About the fonts

Inter is a Google Font. The first time you pick it in any Typography control, Elementor loads it for the whole page. There is nothing to install.

The original design uses **Satoshi** for the four big stat numbers. Satoshi is not a Google Font and is almost certainly not on this site. **Use Inter at weight 500 for those numbers.** Do not go hunting for Satoshi; the difference is invisible at a glance.

Four things before a single widget goes down. The last one fixes a problem that is very annoying to diagnose later.

1a · Build the menu first

The header links jump to anchors on this one page, so the menu is made of Custom Links. **Appearance > Menus** → create a menu named **Lumiere Landing** → open the **Custom Links** panel and add these six in order.

URL	Link Text
#home	Home
#about	About
#services	Services
#reviews	Reviews
#faq	FAQ
#contact	Contact

Leave every **Display location** checkbox unticked, then Save Menu. This menu is only ever pulled in by the Nav Menu widget in Step 2. Tick a location and it also appears in the theme header, which this page does not use.

1b · Create the page

Pages > Add New. Title: **Dental Pain? Get Expert Care in Kota Warisan**. Publish, then **Edit with Elementor**.

Open **Page Settings** — the gear icon at the bottom-left of the Elementor panel:

Tab	Setting	Value
Settings	Page Layout	Elementor Canvas
Settings	Hide Title	On
Style	Background Type	Classic
Style	Background Color	#FAF9F5

Elementor Canvas removes the theme's own header and footer. That is deliberate: this page carries its own header (Step 2) and footer (Step 14), which is what makes it work as a standalone ads landing page.

1c · SEO title, description, site icon

In the WordPress editor, not Elementor, open your SEO plugin's panel for this page:

Field	Value
SEO title	Dental Pain? Get Expert Care in Kota Warisan – Lumiere Dental
Meta description	Experiencing dental pain? Our Kota Warisan dental clinic provides gentle care to help restore your smile. General dentistry, whitening, implants, braces and more at KIPMall Kota Warisan, Sepang.

For the browser-tab icon: **Appearance > Customize > Site Identity > Site Icon** → [favicon.png](#). This is site-wide, so only do it if the clinic is happy for it to change everywhere.

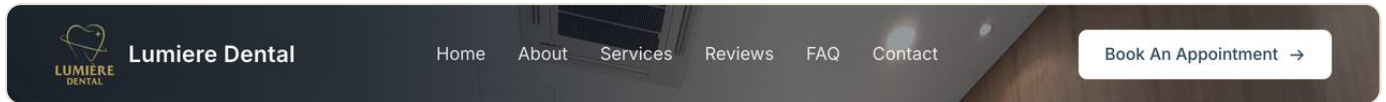

1d · The global CSS block

Still in **Page Settings**, open the **Advanced** tab → **Custom CSS** and paste this. Two lines, both necessary.

```
html{scroll-behavior:smooth}  
#home,#panels,#about,#services,#facilities,#how,#reviews,#faq,#contact{scroll-margin-top:110px}
```

Line	What it does
<code>scroll-behavior</code>	Makes the menu links glide instead of snapping.
<code>scroll-margin-top</code>	Without this the sticky header covers the heading you just jumped to. The header is about 92px tall, so every anchor stops 110px early. If you ever change the header height, change this number to match.

Done when: an empty canvas on warm off-white, a "Lumiere Landing" menu saved under Appearance › Menus, and two lines in the page's Custom CSS.

Transparent over the hero photo, then a solid white bar once you scroll past it.

```
Container    header           Full width - sticky - z-index 100
|- Container header-inner     Boxed 1250 - row - space-between
|   |- Container brand        row - gap 13
|       |- Image    logo
|       |- Heading   brand-name
|- Nav Menu    main-nav
|- Button      nav-cta
```

Container header

This is the ONE place in the build where Elementor's own Sticky is correct. It adds the class `elementor-sticky--effects` once the header starts sticking, and the CSS at the end of this step uses that class to swap the colours.

Tab	Setting	Value
Layout	Container Layout	Flexbox

Heading brand-name

Tab	Setting	Value
Content	Title	Lumiere Dental
Content	Link	Custom URL → #home
Content	HTML Tag	p
Style	Alignment	Left
Style	Text Color	#FFFFFF
Style	Typography › Family	Inter
Style	Typography › Size	Desktop 21 PX · Tablet 19 PX · Mobile 17.5 PX
Style	Typography › Weight	600
Advanced	Margin	Top 0 Right 0 Bottom 0 Left 0

Pointer: **None** removes Elementor's default underline-on-hover, which this design does not have.

Tab	Setting	Value
Content	Menu	Lumiere Landing
Content	Layout	Horizontal
Content	Align	Center
Content	Pointer	None
Content	Breakpoint	Tablet (≤ 1024)
Style	Main Menu › Typography › Family	Inter
Style	Main Menu › Typography › Size	16.5 PX
Style	Main Menu › Typography › Weight	400
Style	Main Menu › Text Color (Normal)	rgba(255,255,255,.86)
Style	Main Menu › Text Color (Hover)	#FFFFFF
Style	Main Menu › Horizontal Padding	15
Style	Main Menu › Vertical Padding	0
Style	Toggle Button › Align	Right
Style	Toggle Button › Color (Normal)	#FFFFFF
Style	Toggle Button › Size	22

The mobile drawer

Below 1024px the menu collapses to a hamburger and the links drop into a panel. Style that panel too, or it inherits theme colours and looks broken. Same widget, Style tab, Dropdown section.

Leave **Full Width** off. Turned on, the dropdown stretches past the sticky header and the first link ends up sitting under the logo.

Tab	Setting	Value
Style	Dropdown › Text Color (Normal)	#1F2833
Style	Dropdown › Background (Normal)	#FAF9F5
Style	Dropdown › Text Color (Hover)	#8F702A
Style	Dropdown › Background (Hover)	FFFFFF
Style	Dropdown › Typography › Family	Inter
Style	Dropdown › Typography › Size	16.5 PX
Style	Dropdown › Typography › Weight	500
Style	Dropdown › Divider	Solid · 1 · #EFECE3
Style	Dropdown › Item Padding	Top 12 Right 20 Bottom 12 Left 20
Style	Dropdown › Full Width	Off

Button alignment is **Style > Button > Position** in Elementor 4.x, not the Content tab. The button hides below 1024 because the hamburger needs that space, and the hero already carries the same call to action.

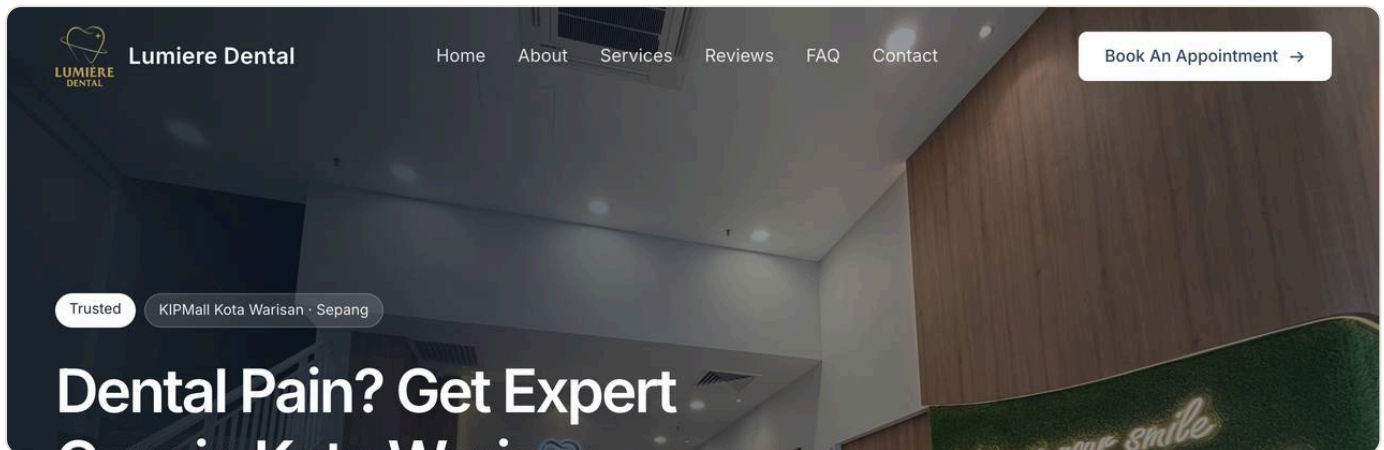

Tab	Setting	Value
Content	Text	Book An Appointment
Content	Link	https://wa.me/601116083188?text=Hi%20Lumiere%20Dental%20Kota%20Warisan%20I%27d%20like%20to%20book%20an%20appointment.

Style	Padding	Top 13 Right 24 Bottom 13 Left 24
Advanced	Responsive > Hide On Tablet	On
Advanced	Responsive > Hide On Mobile	On

The scrolled state

Select the **header** container → **Advanced > Custom CSS** and paste all of this. It is the entire "turns white on scroll" behaviour.

```
selector.elementor-sticky--effects{
  background:rgba(250,249,245,.93);
  backdrop-filter:blur(12px);
  box-shadow:0 1px 0 #E6E2D6, 0 8px 24px -18px rgba(31,40,51,.25);
}
selector.elementor-sticky--effects .elementor-heading-title{color:#1F2833}
selector.elementor-sticky--effects .elementor-item{color:#5A6270}
selector.elementor-sticky--effects .elementor-item:hover{color:#1F2833}
selector.elementor-sticky--effects .elementor-button{background:#33485C;color:#fff}
selector.elementor-sticky--effects .elementor-menu-toggle{color:#1F2833}
```

Done when: the header is invisible against the hero, then fades into a white bar with dark links as you scroll. Under 1024px the hamburger opens a cream panel with dark links.

Exactly one screen tall on every device. Dark gradient over the lobby photo so white type stays readable.

```
Container hero          Full width - 100dvh - bg photo + overlay
|- Container hero-inner  Boxed 1250 - column - align start - z-index 2
|- Container hero-badges row - wrap - gap 8
|   |- Heading badge-trusted
|   |- Heading badge-place
|- Heading hero-h1
|- Heading hero-sub
|- Container hero-actions row - gap 12
|   |- Button btn-book
|   |- Button btn-services
|- HTML hero-proof      <-- paste file
```

Set **Min Height 100 VH** in the panel first, then paste the CSS below. The first rule upgrades it to **dvh** , which tracks the real viewport on phones — with plain **vh** you get a gap where the address bar used to be. The second rule adds the soft darkening along the bottom edge.

The rating row

HTML hero-proof

Add this as the last child of **hero-inner**. It is the four overlapping initial circles plus five stars and "Rated 5.0 on Google Reviews". It is a paste because overlapping circles need a negative margin on each one, which is slow and fragile to build by hand. The file carries its own styling and its own mobile spacing.

Tab	Setting	Value
Content	HTML Code	paste the whole of Step 03 - Hero proof.html
Advanced	Padding	Top 0 Right 0 Bottom 0 Left 0
Advanced	Margin	Top 0 Right 0 Bottom 0 Left 0

Done when: the hero fills exactly one screen on your laptop and in a phone preview, with no scrollbar inside it and no gap underneath.

Grey tray, one white card per insurer.

Image panel-logo

Object Fit: Contain is what lets five logos of totally different shapes sit on one optical line. AIA is nearly square and three others are wide; without Contain the wide ones tower over AIA.

Tab	Setting	Value
Content	Choose Image	one of the five in <code>panels/</code>
Content	Image Resolution	Full
Content	Link	None
Style	Width	Desktop 132 PX · Tablet 112 PX · Mobile 100 PX
Style	Max Width	100 %
Style	Height	Desktop 58 PX · Tablet 50 PX · Mobile 44 PX
Style	Object Fit	Contain
Advanced	Margin	Top 0 Right 0 Bottom 0 Left 0

Build one **panel-item** with its image, then right-click → Duplicate four times and swap the logo. Left to right:

#	File	Image Alt text
1	<code>panels/pmcare.png</code>	PMCare
2	<code>panels/mednefits.png</code>	Mednefits
3	<code>panels/aia.png</code>	AIA
4	<code>panels/healthmetrics.png</code>	HealthMetrics
5	<code>panels/medkad.png</code>	MedKad

On **Mobile view only**, select the fifth panel-item and set Layout > Width to **100 %**, so it centres on its own row instead of sitting alone at half width.

Build card one completely, then right-click **vision-card** → Duplicate three times and fill in the rest:

#	Icon (search this in the picker)	Title	Text
1	Tooth fas fa-tooth	Painless-first dentistry	Gentle techniques from airflow scaling to careful extractions, so treatment stays calm from start to finish.
2	User fas fa-user	Led by Dr Tan Mei-Wen	DDS from MAHSA University with Distinction, plus a postgraduate diploma in clinical orthodontics.
3	Heart fas fa-heart	Family-friendly clinic	A dedicated kids corner and unhurried appointments make first visits easy for the little ones.
4	Shield Alt fas fa-shield-alt	Insurance panel clinic	A panel clinic for major insurers including AIA, PMCare and Mednefits, with claims handled at the front desk.

The photo is shorter than the bio, so it travels down with you as you read.

```
Container doc-block row - align START - bg #FFF - radius 16 - pad 10
|- Container doc-photo width 45% - radius 12 - overflow hidden - STICKY
| |- Image team-neon
|- Container doc-body width 55% - column
| |- Heading eyebrow
| |- Container doc-id row - align center - gap 15
| | |- Image dr-tan
| | |- Container doc-id-text column
| | | |- Heading doc-name
| | | |- Heading doc-role
| |- Heading bio-1
| |- Heading bio-2
| |- Heading bio-3
| |- Heading bio-fun
```

This whole block is a new child of the **about** container from Step 5, sitting directly under **vision-tray**.

Container doc-block

Align Items must be Start, not Stretch. On Stretch the photo is pulled to the full height of the bio column, and then the aspect-ratio rule below works out a width from that tall height — the photo balloons sideways and overlaps the text. This exact bug cost an afternoon when the mockup was built.

bio-1	Dr Tan graduated with a Doctor of Dental Surgery from MAHSA University in 2016, with Distinction in Conservative Dentistry. She began her career in the government sector at Klinik Pergigian Taman Medan, and chose to extend her time in public service before moving into private practice. She also holds a Postgraduate Diploma in Clinical Orthodontics.
bio-2	With a strong interest in preserving natural teeth, Dr Tan believes dentistry goes beyond simply treating teeth. She takes a holistic and individualised approach, taking time to understand each patient's concerns, expectations and overall wellbeing when planning treatment.
bio-3	Her approach centres on clear communication, thoughtful treatment planning and a high standard of care, because building trust and helping patients understand their treatment is what achieves good long-term oral health.
bio-fun	Outside of dentistry she is a home barista with a love for a good cuppa. A fun fact: she is a left-handed dentist working with a right-handed dental chair, something she has happily adapted to throughout her career.

This is the clinic's own supplied biography. Copy it exactly — do not shorten it, reword it, or tidy the phrasing.

Four numbers that count up when they scroll into view.

```
Container stats-tray row - bg #E9E6DD - radius 16 - pad 10
|- Container stat-card x4 bg #FFF - radius 12 - column
  |- Icon icon-tile
  |- Counter counter
```

Also a child of the **about** container, directly below the Dr Tan block.

#	Icon	Ending	Suffix	Title
1	Clock far fa-clock	9	+	Years of Clinical Practice
2	Clinic Medical fas fa-clinic-medical	8	leave empty	Lumiere Branches in Malaysia
3	Tooth fas fa-tooth	8	leave empty	Treatments Offered
4	Star fas fa-star	5	.0	Google Review Rating

Why 5 with a ".0" suffix. Elementor's Counter only counts whole numbers. Ending Number 5 plus suffix **.0** animates 0.0 up to 5.0 and reads exactly like the design. Typing 5.0 into Ending Number just rounds it.

Two of these four are unconfirmed. "9+ years" is worked out from Dr Tan's 2016 graduation, and "5.0" comes from the review screenshots. Get the clinic to confirm both before this page goes live.

Eight cards that pin at the top and let the next slide over them. This is the signature effect of the page.

```
Container services          Boxed 1250 - column - align center (CSS ID: services)
|- Container sec-head       column - align center - width 640
|- Container svc-stack      column - gap 0 - overflow DEFAULT
  |- Container svc-card x8  bg #FFF - radius 24 - row - STICKY
    |- Container svc-media  width 50% - radius 12 - overflow hidden
    |   |- Image svc-photo
    |- Container svc-body   width 50% - column
      |- Container pill row - gold wash - radius 100
      |   |- Image pill-icon
      |   |- Heading pill-label
      |- Heading svc-h2
      |- Heading svc-p
      |- Icon List checklist
      |- Button svc-cta
```

Read this first. The stacking is plain CSS `position: sticky`. **Do not** use Motion Effects > Sticky here — that is a different, JavaScript-driven feature and it will not stack. Sticky also stops working if any ancestor has Overflow set to Hidden, so `services` and `svc-stack` must both stay on Default.

How the stacking effect actually works

This is the one effect on the page that is not a normal layout, so it is worth understanding before you build it. It is **not** an animation, there is no JavaScript, and nothing fades or moves on a timer. It is one CSS property doing all of the work.

Every one of the eight cards gets `position: sticky` with the **same** `top: 100px`. Sticky means: behave like a normal element until you would scroll past that point, then stop and stay there. Because all eight share the same stopping point and they sit one after another in the page, each card scrolls up, parks 100px below the top of the screen, and the next card slides up **over** it. The pinned card never moves again, so by the last card you have a stack of eight, each covering the one before.

The two shadows

The card carries **two** box shadows, and they do different jobs. Elementor's Box Shadow control only takes one set of values, so the second is added in the Custom CSS box below.

Shadow	Values	What it does
Downward (panel control)	H 0 V 10 Blur 30 Spread -18 <code>rgba(31,40,51,.25)</code>	The normal card lift, same as every other card on the page.
Upward (CSS)	H 0 V -6 Blur 24 Spread -20 <code>rgba(31,40,51,.3)</code>	This is what sells the stack. It darkens the top edge of the arriving card so it reads as sitting <i>on top of</i> the pinned one, not merely scrolling past it. Skip this and the effect looks flat and slightly broken.

The Custom CSS, and where it goes

Select **svc-card** → **Advanced** > **Custom CSS** and paste all of this. The word `selector` is Elementor's own shorthand for "this element" — leave it exactly as written, do not replace it with a class name.

```
selector{
  position:sticky;
  top:100px;
  box-shadow:0 -6px 24px -20px rgba(31,40,51,.3),
             0 10px 30px -18px rgba(31,40,51,.25);
}

/* phones: only stack when the screen is tall enough to show a whole card */
@media(max-width:860px) and (min-height:700px){
  selector{position:sticky; top:80px}
}
@media(max-width:860px) and (max-height:699px){
  selector{position:relative; top:auto}
}
```

Do this on card 1 BEFORE you duplicate. Right-click → Duplicate copies a container's Custom CSS along with everything else, so all eight cards inherit the rule for free. If you build all eight first, you will be pasting the same block eight times.

If you paste the CSS above, you can leave the panel's **Style** > **Box Shadow** control switched off entirely — the second line of the CSS already contains both shadows. Use one or the other, not both, or you will end up with three shadows.

Four things that will stop it working

#	Requirement	Why
1	No ancestor may have Overflow: Hidden. Check <code>svc-card</code> 's parents: <code>svc-stack</code> , <code>services</code> , and the page body.	A scroll container anywhere above a sticky element silently cancels it. There is no error — the card just behaves normally. This is the single most common cause.
2	svc-stack Gap must be 0 , and the spacing comes from each card's Margin Bottom 28 instead.	A flex gap is added <i>between</i> the flex items, so as the cards pin it keeps forcing them apart and they never overlap.
3	top must be larger than the header. The header is about 92px tall, so 100px leaves 8px of breathing room.	Set it lower than 92 and the cards pin <i>behind</i> the sticky header and get clipped by it.
4	No Entrance Animation on svc-card.	Elementor's entrance animations work by transforming the element. A transform on a sticky element fights the pinning, and the cards visibly jump as they park.

How to check it

The Elementor editor canvas does not show this properly. Editing overlays and the canvas's own scrolling interfere, so the cards will look wrong while you are building them. That is expected — do not try to fix it from inside the editor.

1. Save, then click the **eye icon** at the bottom of the panel → **Preview Changes**.
2. Scroll slowly through the services section. Card 1 should stop near the top and stay there while card 2 rises and covers it.
3. Keep going. By card 8 you should be looking at a stack, with a faint dark line along the top edge of each arriving card.

4. Then narrow the browser to phone width and scroll again — the cards should still stack, just tighter.

If it does not stack

What you see	Cause	Fix
Cards scroll past each other like a normal list	Overflow: Hidden on a parent, or the CSS did not save	Set <code>svc-stack</code> and <code>services</code> to Overflow Default , then re-check the Custom CSS box
Cards pin but never overlap — a gap stays between them	<code>svc-stack</code> still has a Gap value	Set Layout > Gap to 0 ; spacing lives on the card's Margin Bottom
Cards slide under the header and get cut off	<code>top</code> is smaller than the header height	Use <code>top:100px</code>
Cards jump or flicker as they pin	An Entrance Animation is on the card	Remove it from all eight
Stacking works but looks flat	The upward shadow is missing	Add the <code>0 -6px 24px -20px</code> shadow from the CSS above
Only the last card is visible on a short laptop screen	Working as intended — they are stacked	Scroll back up; the cards un-pin in reverse

The same mechanism appears twice more on this page, with smaller numbers: `doc-photo` in Step 6 (`top:112px`) and `how-sticky` in Step 10 (`top:130px`). Those two each have only one sticky element rather than a stack, so they travel rather than pile up, but the same four requirements apply — especially the Overflow one.

Container services

The CSS ID is what the header menu links jump to. Type it without the #.

Then duplicate seven times

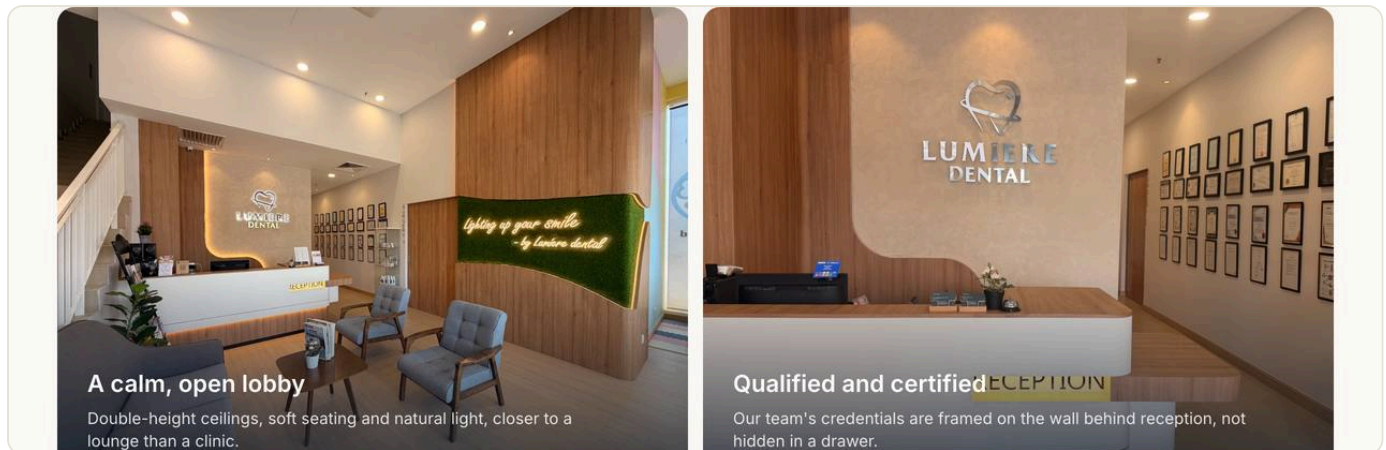

Finish card 1, then right-click **svc-card** → Duplicate, seven times. Change only the content, from the table on the next page.

On cards **2, 4, 6 and 8** set **Layout > Direction** to **Row Reversed — Desktop view only** — so the photo alternates sides. Leave Tablet and Mobile on **Column**. Row Reversed on a phone would put the photo below the text on half the cards.

Pill label, icon file and photo on the left. Heading, description, the five checklist items (split on /) and the button link on the right.

Every button URL begins <https://wa.me/601116083188?text=Hi%2C%20I%27d%20like%20to%20ask%20> — the table shows the tail of each one. %20 is a space; never type a real space into a URL.

#	Pill / files	Copy and link tail
1	General Dentistry icons/general.png svc-scaling.jpg	Everyday Care That Keeps Problems Away Routine checkups, cleaning and fillings that catch small problems before they turn into painful ones. Col	Card	Image	Ratio CSS	Title	Text
1	card-lobby	lobby-reverse.jpg	4/3	A calm, open lobby	Double-height ceilings, soft seating and natural light, closer to a lounge than a clinic.
1	card-kids	kids-corner.jpg	3/4	A corner just for kids	A play tent and soft mats keep young visitors happy while they wait their turn.
2	card-reception	reception.jpg	4/3	Qualified and certified	Our team's credentials are framed on the wall behind reception, not hidden in a drawer.
2	card-neon	neon-wall.jpg	3/4	The smile wall	Lighting up your smile is the promise on our wall, and the standard for every visit.

Do not change the ratios. One landscape plus one portrait per column is what makes the two columns end at the same height. If the clinic swaps a photo later, keep the new one the same shape, or set that card's `aspect-ratio` to match it.

◆ How It Works

From WhatsApp to Follow-Up, Made Simple.

Four steps from your first message to a healthy smile, guided the whole way.

WhatsApp Us

Message 011-1608 3188 and the front desk will find a slot that fits you. The clinic fills up fast, so booking ahead beats walking in.

Consultation

Dr Tan checks your teeth, listens to your concerns and explains what she finds in plain language before anything is decided.

Treatment

The left panel holds still while the four steps scroll past it.

```

Style	Typography › Size	16 PX
Style	Typography › Weight	400
Style	Typography › Line Height	1.4 EM
Advanced	Margin	Top 16 Right 0 Bottom 0 Left 0

This is the one section whose heading block is **left-aligned** — the tables above already carry the correct Alignment values. Put these three widgets inside **how-sticky**, not in a sec-head of their own, and set the **sub** widget's Advanced › Width to Custom **340 PX** so it wraps the way the design does.

Container how-steps

Gap 0 again — the spacing comes from each step's bottom padding, because the hairline is drawn inside that padding.

Tab	Setting	Value
Layout	Container Layout	Flexbox
Layout	Direction	Column
Layout	Align Items	Stretch
Layout	Width	Desktop 50 % · Tablet 100 % · Mobile 100 %
Layout	Gap	0
Advanced	Padding	Top 10 Right 0 Bottom 10 Left 0

Container how-step

On the **fourth** step only, change Padding Bottom to **10**, so the column does not end with a long empty tail.

Tab	Setting	Value
Layout	Container Layout	Flexbox
Layout	Direction	Row
Layout	Align Items	Start
Layout	Gap	28
Layout	Width	100 %
Advanced	Padding	Top 0 Right 0 Bottom 92 Left 0

```
selector{position:relative}
selector::before{
  content:"";position:absolute;left:24px;top:54px;bottom:6px;
  width:1px;background:#E6E2D6;
}
```

Paste that CSS on steps **1, 2 and 3** only. **Leave it off step 4**, or a hairline dangles below the last icon with nothing to join.

Icon icon-tile

With View: Stacked the tile background is **Secondary Color** and the glyph is **Primary Color**.

#

Question and answer

1

How do I book an appointment?

WhatsApp us at 011-1608 3188 and the front desk will confirm your slot, usually within the hour. You can also call the same number or walk in, though appointments are strongly recommended.

2

Are you a panel clinic for my insurance?

We are a panel clinic for AIA, PMCare, Mednefits, HealthMetrics and MedKad. Message us your insurer and policy details and we will confirm your coverage before your visit.

3

Can I just walk in?

Walk-ins are welcome when there is a free slot, but the clinic is fully booked most days. A quick WhatsApp before you come saves you the wait.

4

What should I bring for my first visit?

Bring your IC or passport, your insurance or panel card if you have one, and any previous dental records or X-rays. That's all we need to get you started.

5

Do you treat children?

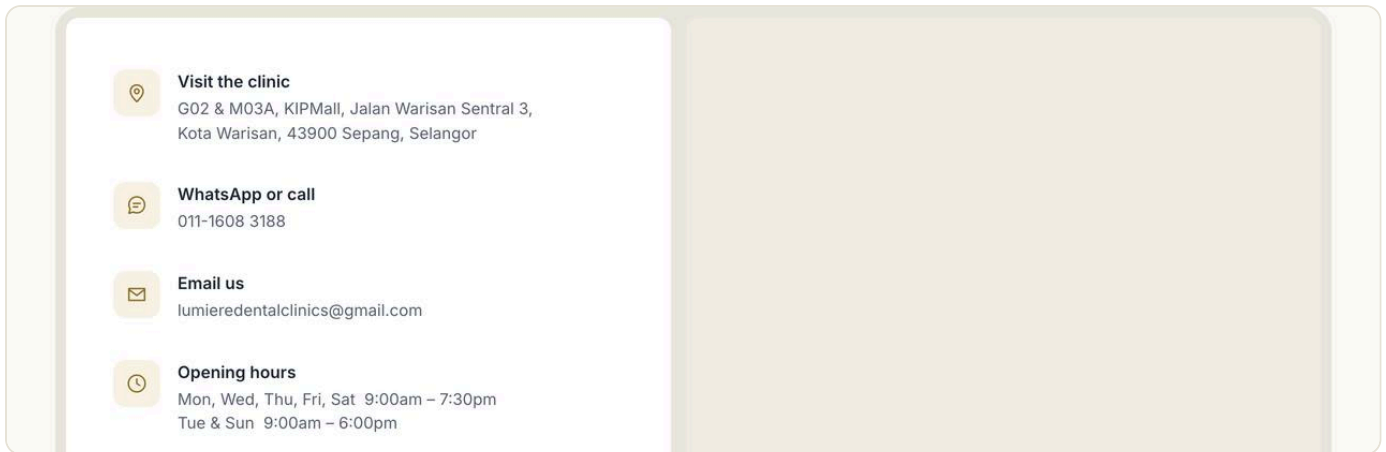

Yes. The clinic has a dedicated kids corner, and Dr Tan paces every appointment around the child rather than the clock.

Question and answer

6 Where exactly is the clinic?

G02 & M03A, KIPMall Kota Warisan, Jalan Warisan Sentral 3, 43900 Sepang, Selangor. We are on the ground floor of KIPMall, with plenty of parking outside.

The original design animates the icon from three bars into an x. Elementor's accordion has its own icon set, so Plus / Minus is the right call. Do not write custom code for it.

Details on the left, live Google map on the right.

Heading f-alt

That 74px right padding on desktop stops the Chinese clinic name running underneath the floating button.

Tab	Setting	Value
Content	Title	Klinik Pergigian Lumiere · 乐美牙科诊所
Content	HTML Tag	p
Style	Alignment	Desktop Right · Tablet Center · Mobile Center
Style	Text Color	#5A6270
Style	Typography	Inter · 14.5 PX · weight 400

The floating WhatsApp button

Elementor Pro has this built in, as its own template type. **Templates > Add New > Floating Buttons** → choose **WhatsApp**.

Tab	Setting	Value
Content	Platform	WhatsApp
Content	Number	601116083188
Content	Message	Hi Lumiere Dental Kota Warisan, I'd like to book an appointment.
Content	Click Action	WhatsApp
Style	Button > Size	Custom → 58 PX
Style	Button > Background (Normal)	#25D366
Style	Button > Icon Color	#FFFFFF
Advanced	Position > Horizontal	Right Offset Desktop 24 PX · Tablet 16 PX · Mobile 16 PX
Advanced	Position > Vertical	Bottom Offset Desktop 24 PX · Tablet 16 PX · Mobile 16 PX

Publish it, then set its **Display Conditions** to this page only, unless the clinic wants the button across the whole site.

Last: the scroll animations

The finished page fades each block up as it comes into view. Select the container named in the left column and set **Advanced > Motion Effects**:

Tab	Setting	Value
Advanced	Entrance Animation	Fade In Up
Advanced	Animation Duration	Slow
Advanced	Animation Delay	see the table below, in ms

Apply to	Animation Delay
Every sec-head (7 of them)	0
Hero: badges, h1, sub, actions, proof	50, 150, 300, 420, 540
The 5 panel-item cards	40, 100, 160, 220, 280
The 4 vision-card cards	50, 130, 210, 290
The 4 stat-card cards	50, 150, 250, 350
doc-block , faq-tray , contact-grid	0 each
The 4 facilities cards	50, 150, 100, 200
The 4 how-step rows	0 each
testi-featured , then the 4 testi-card	0, then 50, 120, 190, 260

Do not put an entrance animation on svc-card . It fights the sticky positioning and the cards visibly jump as they pin.

Done when: the page runs from a full-height hero to a full-width footer, the service cards stack as you scroll, and the green WhatsApp button floats above everything.

- ☐ The hero is exactly one screen tall on a laptop and on a phone. A gap underneath on mobile means the `100dvh` line did not save.
- ☐ The eight service cards stack. If they scroll past each other normally, a parent has `Overflow: Hidden` — check `services` and `sv-vc-stack`.
- ☐ The Dr Tan photo travels with the bio on desktop and sits still on mobile.
- ☐ The How It Works left panel holds still while the four steps pass it.
- ☐ All six menu links land correctly — the heading must not be hidden behind the header. If it is, the `scroll-margin-top` rule from Step 1d is missing.
- ☐ The header turns white past the hero, and the hamburger panel is cream with dark links under 1024px.
- ☐ No sideways scrolling at 390px wide. Usually one container left on a fixed px width instead of 100%.
- ☐ Every WhatsApp link opens with its message pre-filled, and each of the eight service buttons names its own treatment.
- ☐ Nothing is cropped. Compare each card with the live mockup — the 4:3 and 3:4 ratios are deliberate.
- ☐ The four counters animate and land on 9+, 8, 8 and 5.0.
- ☐ The FAQ schema toggle is on and the first item is open on load.
- ☐ Opening hours confirmed with the clinic, not taken from this guide.
- ☐ The two inferred stats confirmed — "9+ years" and "5.0".

Every link on the page, in one place

If something misbehaves

Symptom	Cause	Fix
Cards do not stack	Overflow: Hidden on a parent	Set every ancestor to Default
Sticky jumps instead of sliding	Motion Effects > Sticky was used	Turn it off; use the Custom CSS
Photo overflows its column	Parent Align Items on Stretch	Set the parent to Align Items: Start
Menu link lands under the header	Missing <code>scroll-margin-top</code>	Add the Step 1d CSS
Pill stretches the full width	A width value is set on it	Clear Layout > Width
Image looks soft	Resolution left on Large	Set Image Resolution to Full
Cards jump while pinning	Entrance Animation on svc-card	Remove it from those eight
Counter shows 5 not 5.0	Suffix field empty	Put <code>.0</code> in Number Suffix
Two columns end at different heights	A photo ratio was changed	Restore 4:3 + 3:4 per column
A control is not where this guide says	Elementor version difference	Send a screenshot of that panel
